NTUE DTD

I have about six years of experience in UI/UX development.

I had been working at HP Taiwan for over five years, and I was responsible for the design and development of internal enterprise systems. My work involved user interviews and requirement gathering, which will be translated into design proposals and mockups. Further, I also implemented front-end interfaces and closely collaborated with back-end engineers to accomplish the features.

Prior to that, I also had interned as a UI designer at Trend Micro and Microsoft, where I gained valuable experience in UI design.

ABOUT

I'm proficient in using tools such as Sketch, Adobe XD, and Figma, and also skilled in planning wireframes and creating prototypes.

I have experience in designing complex systems like PLM & ERP, as well as participating in user-flow planning and UI design for various Web and App.

In addition, I'm experienced in front-end development, with strong skills in HTML, CSS, JavaScript, and RWD.

I'm capable of independently completing UI and component implementation.

I'm also familiar with team collaboration tools such as Git and Scrum, and have hands-on experience working in the Agile method.
